      headers: {
        'Authorization': 'Bearer ${localStorage.getItem("accessToken")}'
      }
    });
    return response.data;
  } catch (error) {
    console.log(error);
    throw error;
  }
};
```

Auth, Transactions

```
auth.js
export const login = async ({ email, password }) => {
  try {
    const response = await API.post('/login', { email, password });
    return response.data;
  } catch (error) {
    console.log(error);
    throw error;
  }
};

export const logout = async ({ token }) => {
  try {
    const { data } = await API.post('/logout', { token }, {
      headers: {
        'Authorization': 'Bearer ${localStorage.getItem("accessToken")}'
      }
    });
    localStorage.removeItem("accessToken");
    return data;
  } catch (error) {
    console.log(error);
    throw error;
  }
};

export const register = async (data) => {
  try {
    const response = await API.post('/register', data);
    return response.data;
  } catch (error) {
    console.log(error);
    throw error;
  }
};

export const useDecodeToken = (token) => {
  const { decodeToken, isExpired } = useJwt(token);

  try {
    if (isExpired) {
      return {
        success: true,
        message: 'Token Expired',
        data: null,
      };
    }
  } catch (error) {
    console.log(error);
    throw error;
  }
};

transactions.js
import { API } from '../api';

export const getTransaction = async () => {
  try {
    const response = await API.get('/transactions', {
      headers: {
        'Authorization': 'Bearer ${localStorage.getItem("accessToken")}'
      }
    });
    return response.data;
  } catch (error) {
    console.log(error);
    throw error;
  }
};

export const createTransaction = async (data) => {
  try {
    const response = await API.post('/transactions', data, {
      headers: {
        'Authorization': 'Bearer ${localStorage.getItem("accessToken")}'
      }
    });
    return response.data;
  } catch (error) {
    console.log(error);
    throw error;
  }
};
```
